Profitability by Service

Executive Overview – Insights & Recommendations

Insights:

- The total customer base is 7000, with a churn rate of 27%.
- Average tenure indicates customers stay for about Z months, meaning long-term retention opportunities exist.
- Adoption rates show Internet services are widely used, but Online Security and Tech Support have low penetration.

Recommendations:

- Focus on upselling low-adoption services (Online Security, Tech Support).
- Introduce loyalty programs for customers nearing the end of their contracts to reduce churn.
- Optimize pricing tiers to target the "Growing" segment (1–2 years) to increase retention.

Churn Analysis – Insights & Recommendations

Insights:

- Churn rate is highest among month-to-month contracts, especially customers with shorter tenures.
- Customers with few services (<2 services) have significantly higher churn rates compared to those with bundled services.
- Certain payment methods (e.g., Electronic check) correlate with higher churn rates.
- High churn is concentrated among new customers (<12 months), showing a lack of early engagement.

Recommendations:

- Shift more customers from month-to-month contracts to annual contracts through discounts.
- Design service bundles (e.g., Internet + Security + Backup) to increase stickiness.
- Improve onboarding for new customers to reduce churn within the first year.
- Target electronic check users with incentives to move to credit card / auto-pay, which align with more loyal customers.

Revenue Analysis – Insights & Recommendations

Insights:

- Revenue contribution is dominated by Internet and Streaming services, while Security and Backup services are underperforming.
- Tenure vs Revenue scatter plot shows that customers with high tenure but low charges represent an untapped upsell opportunity.
- Payment method analysis reveals customers paying via auto-pay contribute more stable revenue.

Recommendations:

- Promote premium packages to high-tenure, low-spend customers.
- Focus marketing on upselling underperforming services like Device Protection and Security.
